

The Provale Cup delivers **consistent amounts** of thin liquids to support safer swallowing, regulated pacing, and consistent hydration for individuals with dysphagia.

## Reclaim The Everyday.

Dysphagia doesn't just change how you swallow—it changes how you move through your day. Hydration becomes hard work.

The Provale Cup gives you back what should have always been simple: the ability to take a drink without an audience, without anxiety, and with autonomy.

**No Guessing. No Gulps.**  
Just reliable, predictable  
swallowing every time.

## Why SLPs Are Recommending Provale

**Fixed Volume:** Controlled bolus delivery limits intake to 5cc or 10cc per swallow, reducing aspiration risk from large, impulsive gulps due to a behavioral or structural inability to manage volume of intake.

**Safer swallowing:** Anti-suck technology encourages a natural tilt-and-sip drinking pattern.

**Protocol Ready:** It's easily incorporated into swallow studies to provide an option patients often prefer.

**A Path to Hydration:** For patients who struggle with thickened liquid adherence, creates a transformative opportunity for thin liquid intake under controlled conditions, improving hydration, nutrition, and rehab outcomes.

## Who Benefits?

**Individuals diagnosed with dysphagia** from stroke, Parkinson's, Multiple Sclerosis, ALS, brain/spinal cord injuries, traumatic brain injury, aging with cognitive impairments, pediatric developmental delays, or other Neurodegenerative disorders

Ideal for anyone who **struggles to pace thin liquids**

**Clinicians** can provide consistent dosing during an instrumental evaluation, supporting carryover of dysphagia diet recommendations, and providing possible alternative to thickened liquids for better healthcare outcomes.

Both the **Provale Classic** and **Provale Pro** use a patented, metered-flow technology and provide similar clinical performance. The brand is not only industry-tested, clinically proven and effective, but it just got a lifestyle upgrade. Now clinicians and patients can select the option that best fits functional needs, preferences and daily living.
